

TEADIT 2003 is diagonally braided from pure PTFE son, reinforced with aramid fiber in the corners, and impregnated with PTFE. Lubricated with silicone oil.

Propriétés :

Braided multifilament high performance that combines the advantages of chemically inert PTFE with strength and durability of aramid. Braid multi-purpose valves, rotary, and piston. We recommend mounting this braid on trees or shirts with a hardness greater than or equal to 60 HRC.

Avantages :

Versatility and durability. Long life. Abrasive media, its resistance will depend on the rate of abrasiveness of the product. Extremely strong pressure in piston pumps.

Suitable for a wide range of media.

Médias d'applications :

Its use is ideal for mounting on rotary pumps, valves, taps and the piston pumps and that on almost all fluids, including the abrasive media. **It is particularly suitable and recommended for piston pumps and high pressure.**

Suitable for virtually all media, including steam, oils, solvents, dilute acids and alkalis. It is also suitable for abrasive media such as sand, mud, brine, sewage ...

We reserve the right to modify our products and ranges at any time to improve them.
