

FDA TEADIT Style 2005 is woven from a new type of specific son made from expanded PTFE with filler particles highly refined mineral.

Propriétés :

Style 2005 is an FDA braid very flexible with a high density and consistent with a high degree of flexibility. Quick and simple to install, with minimum maintenance requirements. Because of the malleability of the single yarn used for this braid, emissions (leakage) can be finely adjusted and reduced to extremely low levels. **Very high chemical resistance, low friction coefficient.**

Agréments :

- FDA
- BAM

Avantages :

Resistant to almost all fluids and gases, including corrosive acids and alkalis most, the braid Style 2005 is used universally for taps and valves, with an extremely long service life while reducing maintenance intervals. The special type of PTFE son, improves the workability and heat transfer properties of this braid.

Complies with FDA regulations for use with foodstuffs, drinking water, and pharmaceuticals.

Médias d'applications :

Although primarily designed as a valve or faucet trim, style 2005 FDA can also be used as a gland on rotating equipment such as centrifugal pumps and piston pumps, mixers ...

Unrivalled chemical resistance of PTFE makes this braid, ideal for almost all media, even the most aggressive. It is also suitable for drinking water, pharmaceuticals, food applications, solvents, oils, gases and waste ...

We reserve the right to modify our products and ranges at any time to improve them.
